

There are two types of AMD: Dry and Wet²

Normal Macula

Dry AMD Macula

Wet AMD Macula

Dry AMD

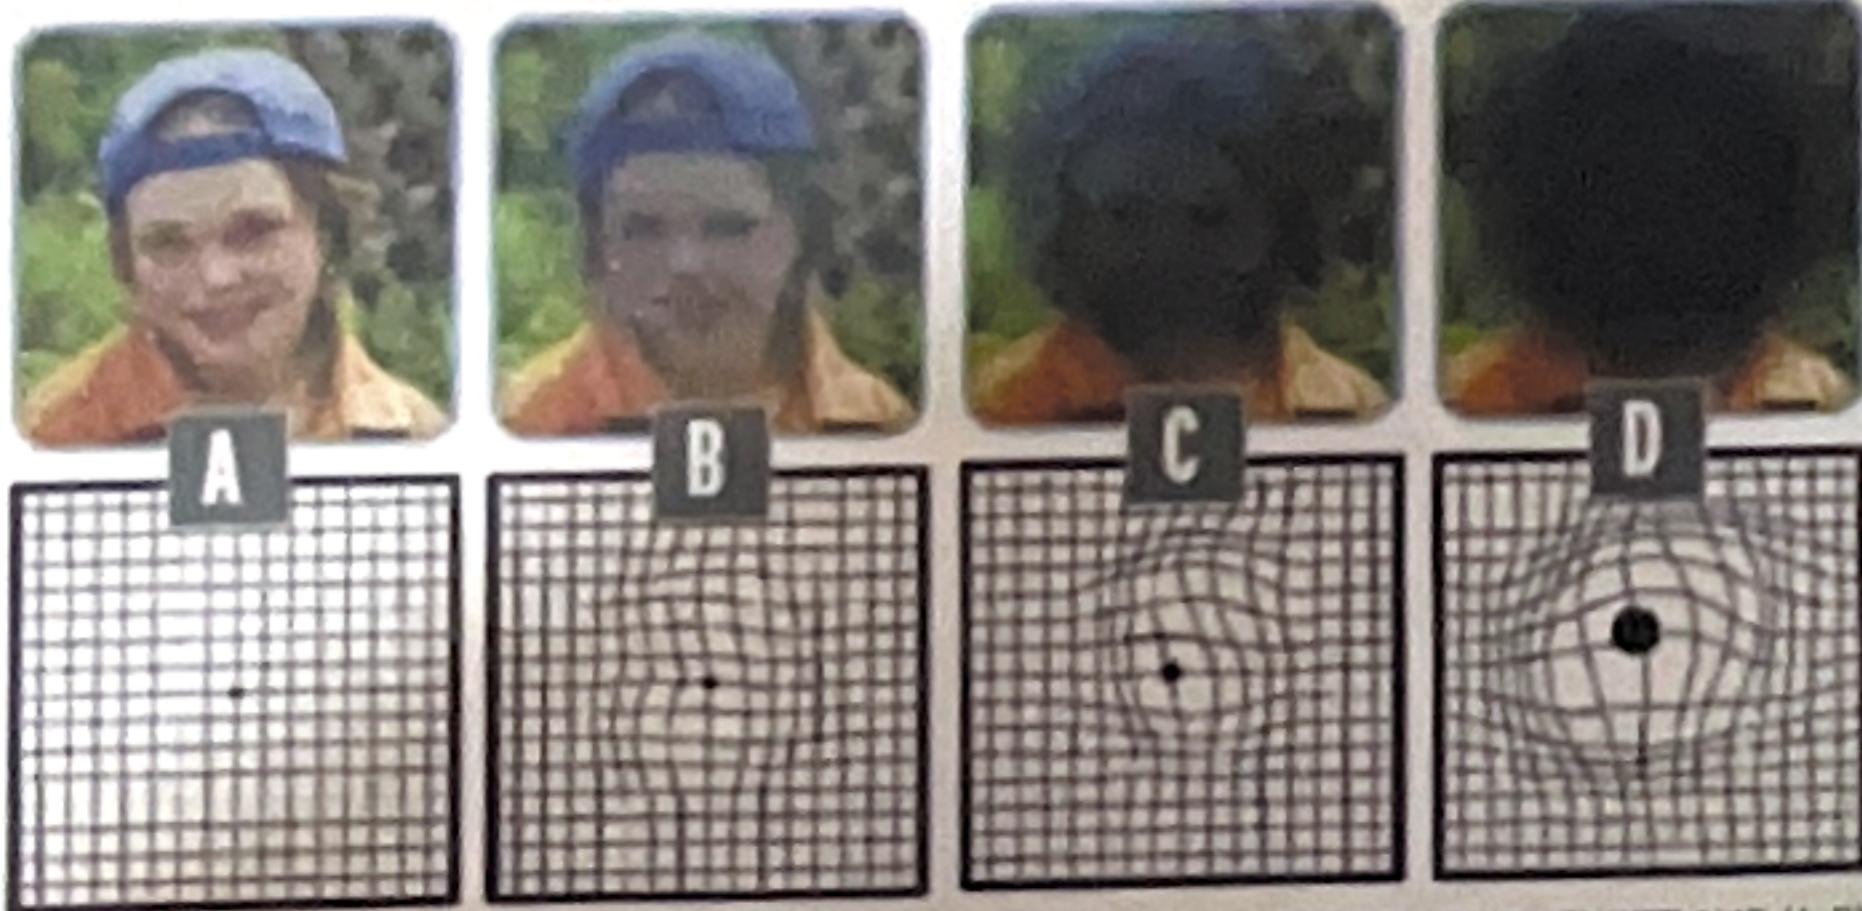

- Most common form
- Occurs in 9/10 cases
- Gradual & slow process – takes several years to get affected

Wet AMD

- Occurs in 1/10 cases but is more severe & most common cause of visual impairment among elderly patients
- Can cause severe vision loss in a short time, just in months
- If bleeding occurs, it can lead to vision loss.

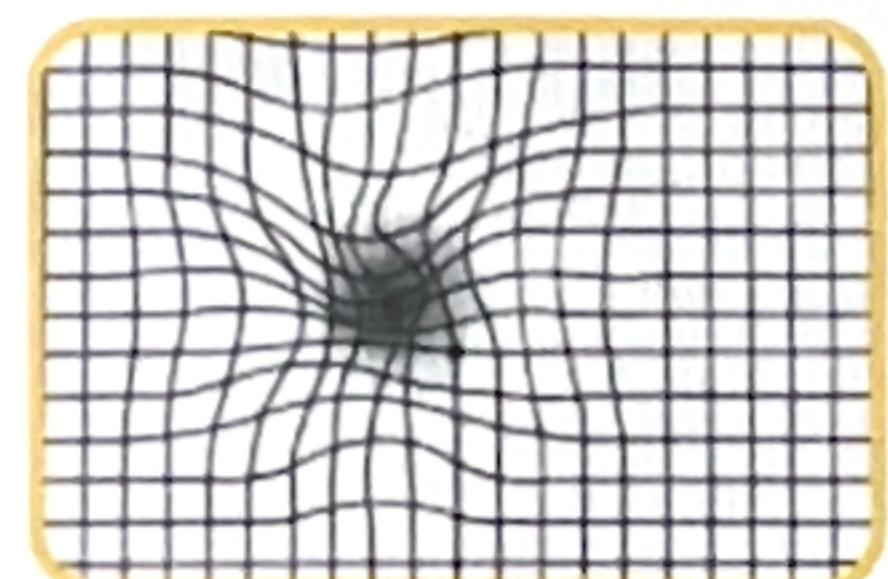

Early detection and treatment of wet macular degeneration may help reduce vision loss and, helps in the recovery of vision.³

PROGRESSION OF WET AMD

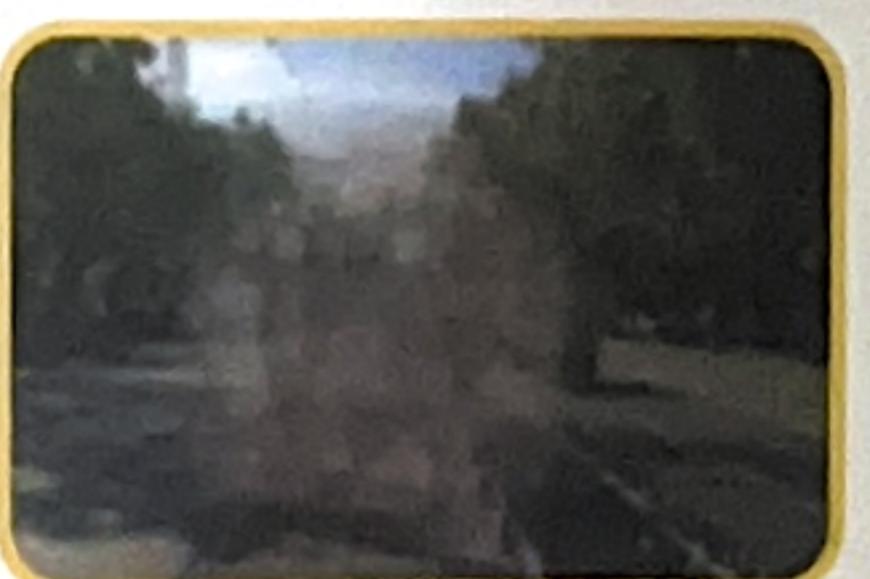

GRAPHIC ILLUSTRATES THE PROGRESSION OF EYESIGHT MOVING FROM NORMAL VISION TO WET AMD (A-D)

How could you know that you are suffering from wAMD?³

Visual distortions,
such as straight lines
seeming bent

Reduced central vision
in one or both eyes

The need for brighter light
when reading or doing
close-up work

Increased blurriness
of printed words

Decreased intensity or
brightness of colors

Difficulty recognizing
faces

You are at a risk of developing wAMD, if³

Your age is more
than 55 years

You have a family
history of Age-related
macular degeneration

You are a smoker

You are obese

You are already
suffering from
cardiovascular disease

How can I prevent it?

Manage your other
medical conditions like
Heart health properly

Don't Smoke

Maintain a healthy
weight and exercise
regularly

Choose a diet
rich in fruits
and vegetables

Have omega-3
fatty acids in
your food

When should I see a Doctor?

- If you notice changes in your central vision
- If you face difficulties in seeing colors and fine details
- These changes may be the first indication of macular degeneration, particularly if you're older than age 60.

wAMD – Wet Age-Related Macular Degeneration

Know Everything A Common Cause of Visual Impairment

Healthy Eye

Macular Degeneration

Age-related macular degeneration (AMD) is the most common cause of severe loss of eyesight among people 50 and older. It affects the central vision and the ability to see fine details.

In AMD, a part of the retina called the macula is damaged. People lose their ability to drive, see faces, and read smaller print in advanced stages can cause vision problems or blindness.¹
